

Type to Learn 4 v1.1 Upgrade Installation Instructions

You must be logged in as an Administrator before running the update. Depending on your connection speed it may take several minutes to download.

Client installation – All Users (Web, Network, and Standalone)

This update needs to be installed on every client machine (Mac and Win) running Type to Learn 4, including home computers running the Web version. It is critical that the original Type to Learn 4 v1.0 is already installed on these machines before running the update patch. You must run the installer on every client machine. **Do not** simply copy the files from one machine to another. This will create permissions problems. Sunburst can provide an MSI installer if requested.

Macintosh Client Steps:

1. Download the update file to the Mac desktop.
2. Unzip the file.
3. Run the TTL4 1.1 Update MAC application.

Windows Client Steps:

1. Download the update file.
2. Unzip it and double-click to launch the TTL4 1.1 Update WIN installer.
3. Click Next.
4. Read the License Agreement and click Yes you agree.
5. The installer will search for installed components. Please wait.
6. The updated files will install.
7. Click Close when setup is complete.

Server installation – Network Version Only

This 1.1 server patch must be installed on your school server that is already running Type to Learn 4. It is critical that the original Type to Learn 4 v1.0 server components are already installed on your server before running the update patch.

Macintosh Steps:

1. Download and unzip the update file.
2. Double-click the file that is colored yellow, called: "TTL4_1.1_MacOSXServerPatch.command".

Windows Steps:

1. Download and unzip the file.
2. Double-click the TTL4WindowsServerPatch10to11.exe to launch the installer.
3. Click Next.
4. Click Install.
5. Click Finish.

Note: The v1.1 update adjusts the database, so any backups you may have previously made will no longer work. The patch automatically backs up your existing database before making changes.
